Dawnwalker PC System Requirements Unveiled

Description

The Blood of Dawnwalker has a release date. The game will come out on 3rd September. The developer, Rebel Wolves, shared the PC system requirements. These requirements are quite high.

The requirements include what type of computer parts are needed for different ways to play the game. Players can run the game at minimum settings with an RTX 3050 or GTX 1070. This lets them play at 1080p resolution with 30 frames per second. To play at the best quality, players need an RTX 5090. This is a very expensive graphics card.

The RTX 5090 costs $1,999 but its price has risen to around $3,699. This card is needed to play at 4K resolution and 60 frames per second. The game may require a lot of power. It is not clear yet if this is because of problems or if the game really needs this much power.

The launch of the game is soon. Many are eager to see how well it will run on different computers.
