

Boost Your Body with Cocoa: Defense Against Fatty Foods & Stress

Description

Certain indulgent foods that provide comfort during stressful times may not always align with our health goals. However, in a surprising twist, researchers have discovered a potential solution to counteract the negative effects of high-fat meals on our health by combining them with a specific type of cocoa.

Stressful situations, even brief ones, have been known to temporarily impact the function of our arteries. Consuming fatty foods, while momentarily satisfying, can actually worsen the stress on our cardiovascular system, hindering our recovery process.

The encouraging news is that there seems to be a remedy, and it comes in the form of a dessert following a high-fat meal. In a controlled study conducted on healthy adults at the University of Birmingham, it was observed that cocoa powder rich in antioxidants could potentially counteract the decline in vascular function associated with stress and fatty foods.

The experiment involved 23 participants consuming a fatty meal consisting of butter croissants with cheddar cheese and whole milk. Half of the group consumed a cocoa beverage high in flavanols, while the other half consumed a low-flavanol version.

After undergoing a mentally stressful task, researchers found that those who consumed the high-flavanol cocoa showed improved arterial function compared to the low-flavanol group. The high-flavanol cocoa beverage seemed to protect against the negative effects of the fatty meal and stress on the participants' arteries.

This study sheds light on the potential benefits of incorporating flavanol-rich foods into our diets, especially during challenging periods. While further research is necessary to confirm these findings, it highlights the role of flavanols in promoting cardiovascular health and potentially cognitive function.

Vocabulary List:

- 1. Indulgent /In'dxl.dzənt/ (adjective): Characterized by excessive indulgence or luxury.
- 2. **Counteract** / kaʊn.təˈrækt/ (verb): To act against something to reduce its force or neutralize it.
- 3. Vascular /'væs.kjv.lər/ (adjective): Relating to or consisting of blood vessels.
- 4. Flavanols /'fleɪ.və.nɔ:lz/ (noun): A type of antioxidant found in cocoa and certain fruits.
- 5. **Cognitive** /'kpg.ni.tiv/ (adjective): Relating to the mental process of perception memory judgment and reasoning.
- 6. **Antioxidants** /,ænti'pk.sɪ.dənt/ (noun): Substances that inhibit oxidation and counteract the deterioration of stored food products.

Comprehension Questions

Multiple Choice

1. What is the potential solution discovered to counteract the negative effects of high-fat meals?

Option: Specific type of cocoa

Option: Orange juice Option: Tomato soup Option: Green tea

2. What impact can stressful situations have on the function of our arteries?

Option: Temporarily impact

Option: Improve Option: No impact

Option: Cause permanent damage

3. How many participants were involved in the experiment conducted at the University of Birmingham?

Option: 20 Option: 23 Option: 30 Option: 40

4. Which group in the experiment consumed a cocoa beverage high in flavanols?

Option: Both groups

Option: One-third of the participants

Option: Half of the group

Option: None of the participants

5. What did researchers observe about arterial function in participants who consumed high-flavanol cocoa?

Option: Decreased function

Option: No change

Option: Improved function

Option: Function remained the same

6. What do flavanols potentially promote according to the study?

Option: Hair growth

Option: Skin hydration

Option: Cardiovascular health

Option: Muscle mass

True-False

- 7. High-fat meals have no negative effects on our health.
- 8. The study participants only consumed green vegetables throughout the experiment.
- 9. The experiment conducted at the University of Birmingham involved only teenagers.
- 10. Cocoa powder used in the study was low in antioxidants.
- 11. Further research is unnecessary to confirm the findings of the study.
- 12. Flavanols play no role in promoting cognitive function according to the study. ESL-NEWS

Gap-Fill

13. The study participants consumed butter croissants with cheddar cheese and whole milk as part of the		
fatty meal consisting of items.		
14. The University of Birmingham study highlighted the potential benefits of incorporating flavanol-rich		
foods into our diets, especially during periods.		
15. Researchers found that those who consumed high-flavanol cocoa showed improved arterial function		
compared to the group.		
16. The study emphasized the role of flavanols in promoting health.		
17. The University of Birmingham study involved participants in total.		
18. Stressful situations can temporarily impact the of our arteries.		

Answer

Multiple Choice: 1. Specific type of cocoa 2. Temporarily impact 3. 23 4. Half of the group 5. Improved

function 6. Cardiovascular health

True-False: 7. False 8. False 9. False 10. False 11. False 12. False

Gap-Fill: 13. three 14. challenging 15. low-flavanol 16. cardiovascular 17. 23 18. function

Vocabulary quizzes

Multiple Choice (Select the Correct answer for each question.)

1. A consortium refers to:

Option: A group of individuals with shared interests

Option: A solo business enterprise

Option: A state government organization Option: An independent research institute

2. Toxicity is a term used to describe:

EWS.COM Option: The medicinal benefits of a substance

Option: The harmful effects of a substance on living organisms

Option: The taste of a particular chemical compound

Option: The color of a poisonous gas

3. A chronic condition is one that is:

Option: Temporary and short-lived

Option: Fatal and incurable Option: Severe but brief

Option: Persisting over a long period of time

4. Cognitive processes involve:

Option: Physical movements and reflexes

Option: Brain functions like thinking and memory

Option: Emotional responses and reactions Option: Respiratory and circulatory activities

5. Enhancing means:

Option: Diminishing or reducing Option: Improving or making better Option: Maintaining at current levels Option: Modifying to be different

6. Proliferation refers to:

Option: Decrease in population Option: Rapid increase or growth Option: Stabilization of numbers Option: High mortality rate

7. Being meticulous involves:

Option: Careful attention to detail Option: Hastily completing tasks

Option: Being reckless

Option: Lacking concern for accuracy

8. Correlations refer to:

Option: Causal relationships Option: Unrelated factors Option: Negative outcomes

Option: Statistical associations between variables

9. Neuroticism is characterized by:

Option: Stability and calmness

Option: Excessive worry and anxiety
Option: Outgoing and sociable behavior
Option: Confidence and assertiveness

10. Vascular pertains to:

Option: Bones and muscles Option: Immune system Option: Blood vessels Option: Digestive system

Gap-Fill (Fill in the blanks with the correct word from the vocabulary list.)

Hazards are potential sources of		to health or the environment.
--	--	-------------------------------

12. The study of changes in gene	expression caused by modification of the
rather than alteration of the gene	etic code itself is called epigenetics.
13. Smoking is a habit that has m	nany effects on health especially on the lungs and
heart.	
14. Being	in unhealthy eating habits can lead to obesity and other health issues.
15. The concept of	in molecules refers to their mirror-image symmetry.
16. Regular exercise has a	impact on overall health and well-being.
17. An	studies the patterns causes and effects of health and disease conditions in
defined populations.	
18. Taking the prescribed	is important to manage certain medical conditions.
19. To	the negative effects of stress individuals can practice relaxation
techniques.	
20. The	impact of small lifestyle choices can significantly affect long-term health
outcomes.	
Matching Sentences (Match	each definition to the correct word from the vocabulary list.)
21. The reckless actions of the	driver led to severe repercussions for all involved.
22. Her meticulous attention to	detail and conscientiousness made her a valuable team member.
23. Various psychological disord	ders can impact an individual's daily functioning and well-being.
24. Consuming foods rich in flav	vanols may have positive effects on heart health.
25. The alterations made to the	original design improved the efficiency of the product.
26. The process of methylation	plays a role in gene expression and regulation.

- 27. Regular exercise is beneficial for cardiovascular health and overall fitness.
- 28. Fruits and vegetables are rich sources of antioxidants which help protect cells from damage.
- 29. His dedication and hard work epitomized the values of the company.
- 30. The epidemiologist conducted a comprehensive study to determine the cause of the disease outbreak.

Answer

Multiple Choice: 1. A group of individuals with shared interests 2. The harmful effects of a substance on living organisms 3. Persisting over a long period of time 4. Brain functions like thinking and memory 5. Improving or making better 6. Rapid increase or growth 7. Careful attention to detail 8. Statistical associations between variables 9. Excessive worry and anxiety 10. Blood vessels

Gap-Fill: 11. danger 12. epigenome 13. detrimental 14. indulgent 15. homochirality 16. substantial 17. epidemiologist 18. medication 19. counteract 20. cumulative

Matching sentence: 1. Repercussions 2. Conscientiousness 3. Disorders 4. Flavanols 5. Alterations 6.

Methylation 7. Cardiovascular 8. Antioxidants 9. Epitomizing 10. Epidemiologist
