

Experts Identify Impulse Control Disorder Leading to Risky Behavior in Some Patients

Description

A warning has been issued to individuals looking to lose weight through injections, as they may experience unexpected side effects, including reckless behavior. Slimming jabs such as Ozempic and Wegovy, endorsed by influential figures like Elon Musk and Jeremy Clarkson, have been known to help with weight loss, but experts caution about possible risky actions like compulsive gambling and impulsive major life decisions, such as divorce. Changes in dopamine levels in the brain, possibly due to the injections, could be responsible for these behaviors, according to researchers. Patients are advised to be informed about these potential reactions, termed impulse-control disorder, before starting treatment. Despite the noted weight loss benefits, the injections may lead to adverse outcomes, reminding users to prioritize their well-being when considering such treatments.
