I've Created a Better Option for Uncomfortable Smear Tests

Description

Sânziana Foia Develops Non-Invasive Test for Cervical Cancer Detection

Sânziana Foia, a post-graduate student from Romania, has created a revolutionary non-invasive test to detect signs of cervical cancer. Her innovation, called Papcup, allows women to test themselves at home using a sample of menstrual blood, eliminating the need for uncomfortable doctor visits.

Sânziana was inspired to develop this test after her own unpleasant experience with a traditional smear test. She envisioned a better, more convenient way for women to monitor their health, and Papcup was born. This device utilizes bio-sensors to detect cancer-causing HPV strains in just 15 minutes, offering immediate results without the need for waiting or follow-up appointments.

Supported by the University of Edinburgh's Venture Builder Incubator program, Sânziana is now working on refining the Papcup prototype and conducting clinical trials. The goal is to provide women with a more comfortable and accessible screening experience that can potentially save lives through early detection.

Cidgem Selli from Cancer Research Horizons emphasizes the importance of early cancer detection and praises Sânziana's innovative approach. The Papcup not only addresses the gap in healthcare by offering a convenient screening option but also empowers women to take control of their own health.

With the Papcup, women of all ages and menstruation statuses can easily monitor their cervical health in the comfort of their own homes. By breaking down barriers to traditional smear tests, Sânziana's invention aims to make cervical cancer screening more accessible and comfortable for all women.
