New Pixel 9 Leak Shows Specifications and Benchmarks for Tensor G4

Description

A set of leaked images of the upcoming Google Pixel 9 series has revealed some key details about the devices. The latest benchmark tests show that the Tensor G4 chip, powering these smartphones, features a 1+3+4 core configuration, with the Cortex-X4 as the main core. This setup marks a significant shift from previous models, with improvements in performance and power efficiency.

Comparing the Tensor G4 with its predecessors, we see a notable increase in processing power and energy efficiency. The Cortex-X4, similar to the Snapdragon 8 Gen 3, boasts a 15% performance boost and 40% better power efficiency. Additionally, the A720 core offers a 20% improvement in power efficiency compared to the previous model.

Early benchmark results for the Pixel 9 series show promising performance gains. The Pixel 9 Pro XL, equipped with the Tensor G4 chip, scored an impressive 1,176,410 points on the AnTuTu test, surpassing its predecessor, the Pixel 8. With the upcoming release of the Pixel 10 and Tensor G5, utilizing TSMC technology, buyers can expect even more advancements in performance and efficiency.
