

Privacy Nightmare: Microsoft Copilot+ Recall Feature Raises Concerns

Description

The UK data watchdog is currently investigating Microsoft's new feature, Recall, which has sparked concerns over its potential invasion of privacy. Recall is designed to take screenshots of a user's laptop every few seconds, storing encrypted snapshots locally on the computer. This feature is exclusive to Microsoft's upcoming Copilot+ PCs, sparking worries among privacy campaigners and the Information Commissioner's Office (ICO).

Microsoft has reassured users that Recall is an "optional experience" and that privacy and security are a top priority. However, the ICO is adamant that firms must rigorously assess and mitigate risks before launching new products. Recall's ability to search through past activity, including files, photos, emails, and browsing history, has been described as a "privacy nightmare" by experts.

Despite Microsoft's claim that users have control over what is captured, concerns remain about potential breaches of privacy and security. Recall's capability to capture passwords and sensitive information has raised further alarm, with experts cautioning against using sensitive data on devices with this feature.

Overall, the debate surrounding Recall highlights the ongoing tension between innovation and privacy rights in the digital age. As Microsoft faces scrutiny over Recall, the tech giant must address these concerns and ensure that user privacy remains a top priority in all its products.
