

The potential threat of bird flu to the practice of cow cuddling

Description

In Monee, Illinois, cow cuddling has become a popular trend, with visitors paying farmers for the chance to snuggle up with their hefty heifers. Luz and Dan Klotz, owners of Luz Farms, have opened their barn doors to city dwellers seeking a taste of country fun. However, a new risk has emerged as the U.S. Department of Agriculture confirmed cases of bird flu in dairy herds across nine states.

Despite the outbreak, cow-cuddling sessions continue to be in high demand at farms like De Vor Dairy Farm and Creamery in Michigan and Clarksville Cow Cuddling in Maryland. These sessions not only provide a therapeutic experience for visitors but also serve as a crucial source of income for small family farms struggling to make ends meet.

While government officials advise limiting outside visitors to prevent the spread of the virus, farmers like Henk De Vor and the Klotz family have implemented safety measures to protect both their animals and guests. These precautions have allowed them to continue offering cow cuddling experiences while keeping their farms operational.

With the decline in U.S. farm incomes, activities like cow cuddling have become vital for small farmers looking to diversify their revenue streams. Despite the challenges posed by the bird flu outbreak, the resilience and adaptability of these farmers ensure that the tradition of cow cuddling continues to bring joy and economic benefits to both visitors and farm owners alike.
